Initial participation rate (less than $100,000)	35%

This material is not authorized for use unless preceded or accompanied by the Power Select AICO Index Annuity consumer brochure (I6586CON) consumer brochure and Owner Acknowledgment and Disclosure Statement. Rates shown are NOT interest rates (except for the Fixed Interest Account). See pages 2-4 for applicable minimum rates and other important information. New rates may apply after the end of the first index term and are subject to minimum and maximum guarantees. Minimum or maximum rates apply after the end of the first index term. The participation rate is set at 100% unless otherwise noted.

Key terms and information

Fee is calculated as a percentage of the premium in the first year and as a percentage of the contract's prior anniversary value in years 2-5. The fee terminates on the 5th contract anniversary. In most market scenarios where an Overlay Credit is earned, the amount of the credit will be more than the amount of the fees that have been deducted over the 5-year period. In certain up market scenarios, the credit may not be sufficient to cover all fees due to the maximum overlay amount.
Index rate cap: Maximum percentage of index performance that can be credited as interest over an index term. For example: **10%** index change > **5%** cap = **5%** interest earned.
Maximum rate: percentage of the net premium that is used to help determine the maximum value of the Additional Interest Credit Overlay.
Multiplier rate: percentage applied to the contract value to help calculate the overlay benefit.
Net premium: total premiums reduced by any withdrawals in the same proportion that the withdrawals reduced the contract value.
Overlay Credit: the amount added to the contract value on the 5th contract anniversary.
Participation rate: Percentage of index performance that is used to calculate interest. For example: **10%** index change x **50%** PAR rate = **5%** interest earned.
Premium: Money used to purchase the annuity.

Annuities are issued by **American General Life Insurance Company** (AGL), Houston, TX.

Important information on Power Select AICO Index Annuity

Index annuities are not a direct investment in the stock market. They are long-term insurance products with guarantees backed by the claims-paying ability of the issuing insurance company. They provide the potential for interest to be credited based in part on the performance of the specified index, without the risk of loss of premium due to market downturns or fluctuations. Index annuities may not be appropriate for all individuals.

Withdrawals may be subject to federal and/or state income taxes. An additional 10% federal tax may apply if you make withdrawals or surrender your annuity before age 59½. Consult your tax advisor regarding your specific situation.

Index interest accounts are not a permanent part of the contract and may be removed due to circumstances beyond the control of American General Life Insurance Company. Such circumstances include, but are not limited to, the discontinuation of an index, a change in the composition or calculation of an index, the inability to license the use of an index and the inability to hedge risks associated with these index interest accounts. Special rules govern how assets in a discontinued index interest account may be reallocated. These rules may differ by state. Please see the Owner Acknowledgment and Disclosure Statement for more information.

All contract and optional benefit guarantees, including any fixed account crediting rates or annuity rates, are backed by the claims-paying ability of the issuing insurance company. They are not obligations of or backed by the distributor, insurance agency or any affiliates of those entities and none makes any representations or guarantees regarding the claims-paying ability of the issuing insurance company.

This material is general in nature, was developed for educational use only, and is not intended to provide financial, legal, fiduciary, accounting or tax advice, nor is it intended to make any recommendations. Applicable laws and regulations are complex and subject to change. Please consult with your financial professional regarding your situation. For legal, accounting or tax advice consult the appropriate professional.

[1] The declared index interest percentage for each contract year is used to determine any potential future interest credit under Progressive Trigger. The Index Term End Date is the earlier of the date the Trigger Condition is satisfied or five years. Once the Trigger Condition is met, a new Index Term begins with a newly Declared Index Interest Percentage.

This material is not authorized for use unless preceded or accompanied by The Power Series of Index Annuities (I6110CON) consumer brochure and Owner Acknowledgment and Disclosure Statement. Rates shown are NOT interest rates (except for the Fixed Interest Account). See page 4 for applicable minimum rates and other important information. New rates may apply after the end of the first index term and are subject to minimum and maximum guarantees. Minimum or maximum rates apply after the end of the first index term. The participation rate is set at 100% unless otherwise noted.

Key terms and information

Enhanced participation rate (EPR): A higher participation rate available in select accounts for an annual fee. For example: 10% index change x 110% EPR = 11% interest earned

Index rate cap: Maximum percentage of index performance that can be credited as interest over an index term. For example: 10% index change > 5% cap = 5% interest earned.

Participation rate: Percentage of index performance that is used to calculate interest. For example: 10% index change x 50% PAR rate = 5% interest earned.

Performance-triggered: Initial declared interest rate is credited to the account if index performance is equal to or greater than the minimum index value change. For example: 10% index change → 5% declared interest rate = 5% interest earned.

Premium: Money used to purchase the annuity. In Oregon, a Power Series Index Annuity can only be issued with a single premium. No additional premiums are allowed.

Progressive Trigger declared index interest percentage: The percentage used to determine a potential interest credit under Progressive Trigger. It is not automatically credited to the contract. If the trigger requirement is not met, eligible percentages may be retained in Memory for purposes of determining a potential future interest credit. Not available in CA.

Spread: Minimum percentage or threshold that the index's performance must exceed to be credited interest.

Note: Enhanced Participation Rate (EPR) accounts are available for an annual fee. You may receive higher interest credits in EPR accounts, but interest credits are based in part on the performance of an index and not guaranteed. At the end of your contract's withdrawal charge period, if the total amount of EPR strategy fees exceeds the total interest earned in the annuity, the difference will be credited to your annuity.

Annuities are issued by **American General Life Insurance Company** (AGL), Houston, TX.

The initial fixed interest rate, participation rates, caps, performance-triggered rates and Progressive Trigger percentages shown above and on the previous pages are current non-guaranteed elements. They are not guaranteed beyond the initial index term and may be changed by the insurer, subject to the minimum guarantees and other limitations in the contract. Speak with your financial professional or broker dealer for applicable minimum rates. Actual interest credited may be higher or lower and may be zero for an index term. Index annuity rates are subject to change at any time until contract purchase.
